

# INTERIOR DOORS

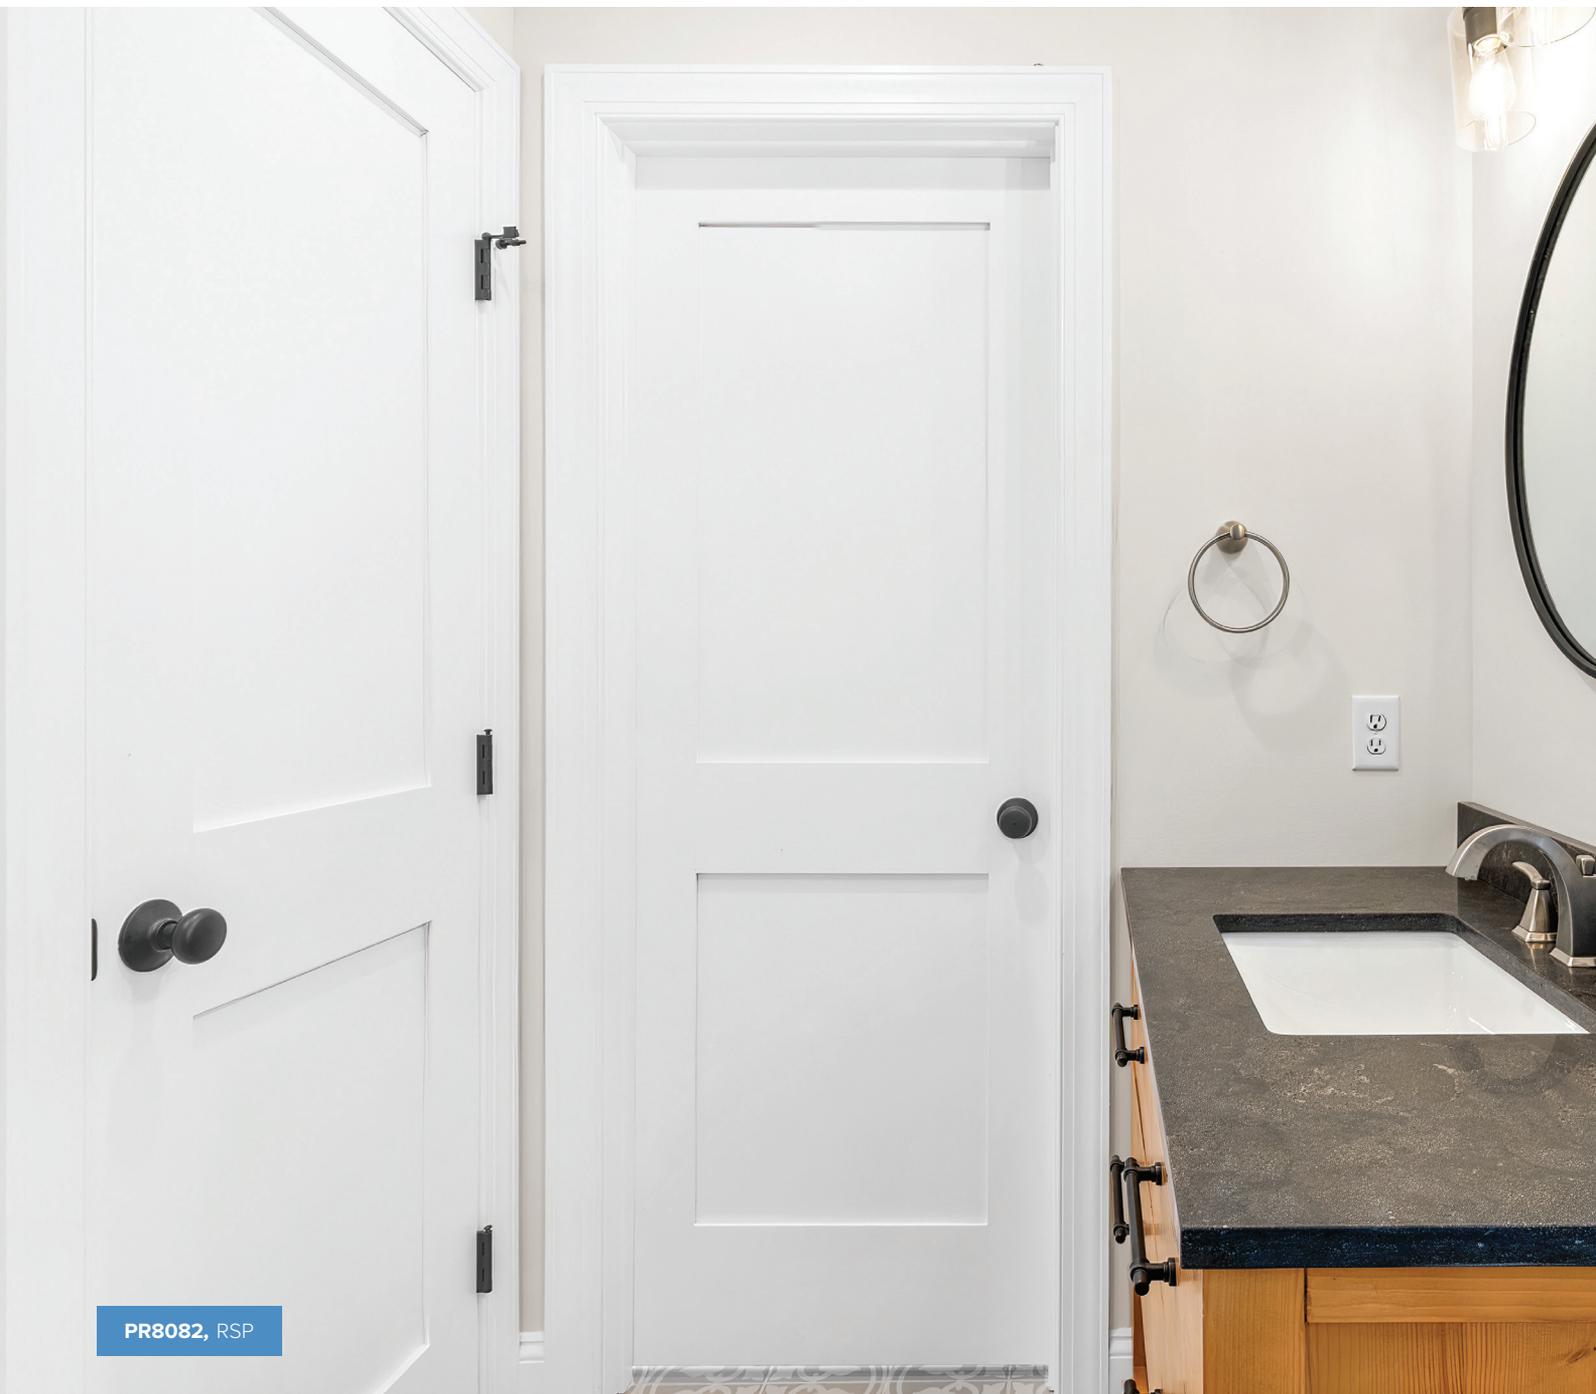

REEB<sup>®</sup> IN-STOCK INTERIOR PRIMED STILE & RAIL DOORS

# Introduction

Primed stile and rail doors are an ideal choice for homeowners seeking to add a clean look to their Modern, Traditional or Craftsman style homes. They feature architecturally correct layouts, crisp shadow lines and highly defined panels providing a superior level of detail.

Recent developments within the millwork industry continue to strengthen the case for primed stile and rail doors, making them an excellent choice for discerning homeowners seeking increased strength, better durability and greater life expectancy at a similar price point to their molded door counterparts.

# Construction

Primed stile and rail doors are wood components joined together with dowel pins. The stiles and rails have an engineered wood core covered with an MDF veneer creating an excellent surface for painting. Constructing a door with different components brings definition that cannot be replicated by a molded door.

- 1 Stile:** The stiles have a solid wood engineered core for added strength, stability, and reduced sound transmission.
- 2 Rail:** The rails also include a solid wood engineered core.
- 3 Panel:** Flat and Raised Panels are made with MDF for a smooth paint finish, stability, and comply with no added formaldehyde regulation.
- 4 Dowel Pins:** Traditional dowel pin construction creates a secure joint, connecting the stile and rail components together.
- 5 Veneer:** An MDF veneer is permanently bonded to the engineered wood core, eliminating dents, dings, and gouges which makes a superior paint surface.

## Stiles, Rails & Veneer

The stiles and rails have a solid wood engineered core for added strength, stability, and reduced sound transmission.

An MDF veneer is permanently bonded to the core resisting dents, dings, and gouges. The veneer when compared to other imitation products makes for a superior and smooth painting surface.

## Architecturally Correct

Each door is made with perfectly proportioned stiles, rails and panels that are created individually to ensure that every door is architecturally correct.

## Sharp Details

Primed stile and rail doors join components together to create sharp shadow lines with a 90 degree shaker sticking.

- 1 True 90 degree angle provides sharp detail.
- 2 Solid wood engineered core for added strength, stability and reduced sound transmission.

# Primed Louvers

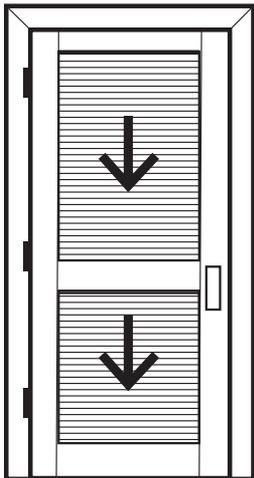

Louver doors allow for air flow while providing privacy.

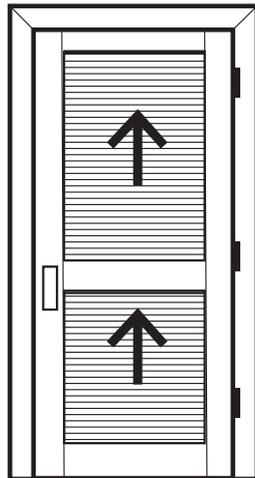

1-1/4" Louver Slats

2-1/2" Louver Slats

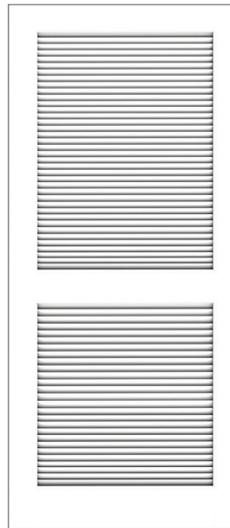

When the blind side is on the hinge side, the louvers run **down**, meaning you **cannot** see into the next room.

When the blind side is on the stop side, the louvers run **up**, meaning you **can** see into the next room.

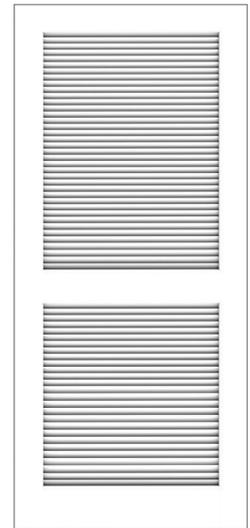

When ordering a louver door, it is important to specify which side is the blind side. View the door as if you are in the inside of the room and the door is opening toward you.

For Louver Doors with Contemporary style featuring a unique slatted ventilation, please see page 28.

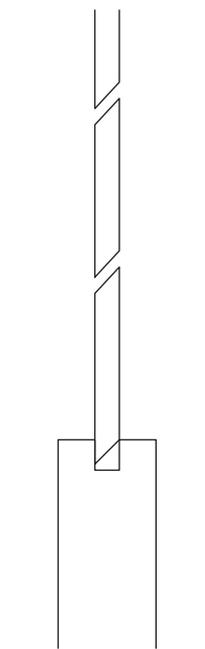

# Contemporary Doors

Reeb® contemporary louver doors have shaker sticking and unique slotted louver ventilation. Cut at an angle into the panel, the slotted louvers give the same ventilation possibilities as louver slats, but with a different aesthetic. This contemporary door pairs well with other shaker-style flat panel doors.

2/8 x 6/8	2/0 x 7/0	3/0 x 7/0

Reeb's modern-style Flush MDF doors have a premium 1/4" thick veneer. Traditional flush doors have a thin veneer over a solid particle core and grooves cut into the door for designs must be shallow, so the grooves are cut 1/8" deep, resulting in crisper shadow lines for greater definition.

## FLUSH MDF

These contemporary doors have a unique lattice wood core that provides exceptional strength and improved stability. They have the feel of a real wood door without the weight that can lead to hinge issues. These doors can be prepped for the typical backset options or a mortise pocket.

For a consistent design,  
the strike side will always  
be on the stile line side  
of the door.

# Interior Door Units

After choosing the perfect door, there are additional features that can be included to complete your door unit. These include adding transoms and sidelites for more light, choosing a frame that matches your door, and selecting hardware to match your home's interior.

## INTERIOR TRANSOM

### PRT001

Primed, Clear Glass,  
Ovolo Sticking

# Primed Fire Doors

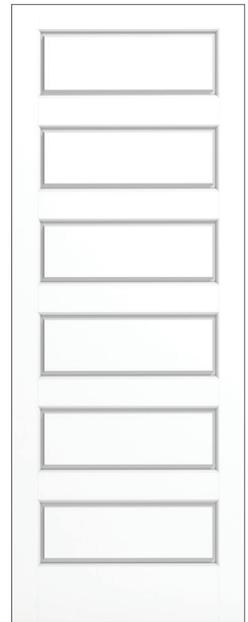

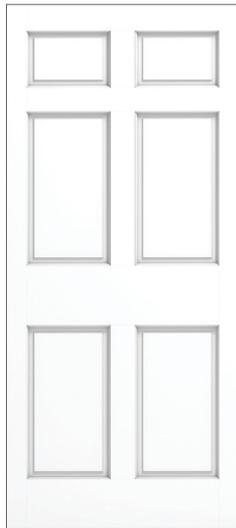

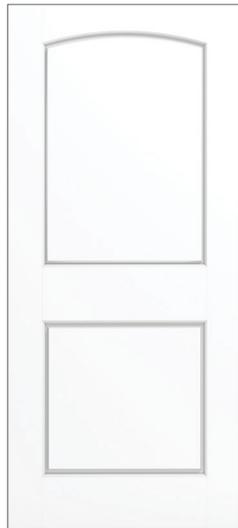

These doors are labeled with a 20 minute positive pressure rating. The panels are layered with a fire rated material and the stiles are solid wood. Additional requirements may be necessary for door installation.

# Flat Frames

## Flat

Flat frames come in a variety of species including solid and veneered wood. They include the need for a stop. This option may not be available in all markets so please confirm availability prior to ordering.

PRIMED

CLEAR PINE

PINE VENEERED

KNOTTY ALDER VENEERED

FIR VENEERED

MAPLE VENEERED

SOLID POPLAR

PRIMED SOLID POPLAR

SOLID OAK

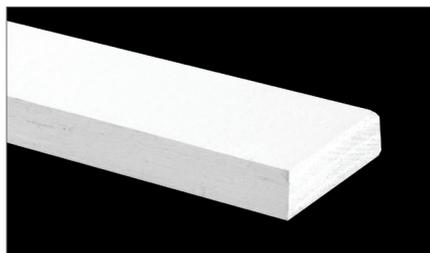

OAK VENEERED

## Stops

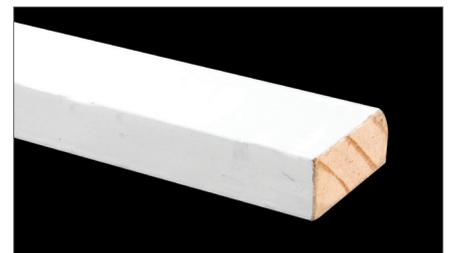

Known as a "stop", these small pieces of wood attach to a flat frame to give the door a place to stop. Optional PortaSeal weatherstrip stops are available for use to prevent drafts.

PRIMED WM-888

PRIMED WM-876

PRIMED WM-888H

PRIMED WM-936

PRIMED WM-948

PORTASEAL WEATHERSTRIP

# Rabbeted Frames

## Single Rabbeted

Single rabbeted frames mimic the appearance of exterior frames for interior use. This option may not be available in all markets so please confirm availability prior to ordering.

PRIMED

CLEAR PINE

PRIMED SOLID POPLAR

## Double Rabbeted

Double rabbeted frames work well with either a 1-3/8" or 1-3/4" thick door. This option may not be available in all markets so please confirm availability prior to ordering.

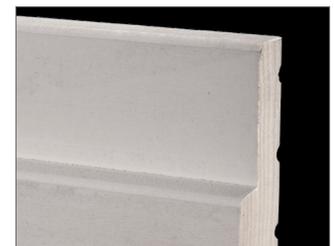

PRIMED

CLEAR PINE

CLEAR FIR

PRIMED SOLID POPLAR

# Split Frames

## Split

Split frames are two pieces of wood together which work well for odd wall sizes. Due to their construction, a split frame is able to work for a range of wall sizes. For example, Reeb® stocks a split frame that has a size range of 4-1/2" to 5-1/4" thick.

PRIMED

CLEAR PINE

Also with split frames is the availability to use interior casing. When installing a split frame with casing, the two pieces must be taken apart. This allows the unit to be shipped with the casing pre-attached and ready for a complete install. This option may not be available in all markets, so please confirm availability prior to ordering.

## Sills

OAK SADDLE SILL

Oak saddle sills provide an aesthetic solution to residential threshold applications. If the unit does not include weatherstrip, a standard width saddle sill works well.

OAK SADDLE SILL WITH WEATHERSTRIP

For flat frames with PortaSeal or single rabbeted frames with weatherstrip, a wider saddle sill works best. It allows the bottom of the frame to sit flush on top of the sill. Three-sided units do not need a sweep, but four-sided units will use a sweep for the best seal.

# Hinges

## BALL BEARING HINGES

Ball bearing hinges have a steel ball bearing, or buffer, in between the knuckles. Heavier doors put more stress on the hinges so having the ball bearings reduce friction, are better performing and longer lasting.

Ball Bearing Square

Ball Bearing Radius

## NON BALL BEARING HINGES

Standard, or plain bearing, have no buffer between each knuckle of the barrel. This tends to wear the hinge down over time as the sections grind against one another and are better suited for lightweight doors.

Non Ball Bearing Square

Non Ball Bearing Radius

## HINGE SIZES

Most interior doors are 1-3/8" thick and use 3.5" x 3.5" hinges. On an 1-3/4" door in an interior application Reeb® will automatically utilize a 4" hinge.

3.5" x 3.5"

4" x 4"

# Baldwin®

Baldwin believes that quality should never be a compromise. From using the finest materials to crafting hardware by hand, they are committed to creating high-quality hardware that not only looks beautiful and flawless but also endures the rigors of time.

# Catches

Catches are an alternative way to close a door and are often used in closet applications. Ball catches and Roller catches are recessed in the top of the door while a Surface Magnetic Catch is installed on the face of the door. A strike is installed on the head frame and the two keep the door closed without the need of a latch. The Concealed Magnetic Catch is recessed into the top of the door and the head frame, which conceals the catch.

## Precision™ Concealed Magnetic Catch

## Same Construction, with the Beauty of Real Wood

While a painted door is beautiful, staining your door brings a layer of beauty and sophistication. Check out our in-stock Interior Stile and Rail Catalog to view the available species and designs to help your house feel like a home.

Visit the Reeb® Learning Center for education on choosing the proper door unit, new products, and what product options are available.

Visit the Reeb Learning Center at [learn.reeb.com](https://learn.reeb.com)
